The composition can be used to inhibit the proliferation of cancer or virally infected cells, or induce apoptosis in cancer or virally
                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                            The sequences given in AAW25604-05 are antigens which are used in the kits of the invention. The kits allow for immunological assay of Fas antigen. They comprise anti-Fas antibody specifically bound to an area of a cell showing Fas antigen, which is immobilised on an insoluble supporting material. The labelled anti-Fas antibody specifically binds to "out-of-area" of Fas antigen and standard Fas antigen extracted from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Kit for immunological assay antibody specifically bound

                                                                                                                                                                                                                                                                  The present invention relates to a new method for modulating a biological function of an endothelial cell or hematopoistic cell. The method involves introducing into a cell, an antagonist that inhibits binding between a PDZ protein and a PL protein. The inhibitor is used to treat a disease mediated by hematopoietic cells, e.g. autoimmune disease. It may also be used to prevent transplantation rejection of a solid organ transplant. The method may also be used in the treatment of inflammation, allergy, inflammatory bowel diseases, ulcerative colitis, ileitis, psoriasis, asthma, atopic dermatitis, autoimmune diseases (e.g. rheumatoid arthritis, multiple sclerosis, insulin-dependent diabetes, Hashimoto thyroiditis, osteoarthritis, graft rejection, transplantation rejection), atherosclerosis, cancers, infectious diseases, ischemia, vasulitis and Crohn's disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-MAY-1999;

The present invention relates to a method for modulating a biological CC function of an endothelial cell or haematopoietic cell, comprises introducing into a cell an antagonist that inhibits binding between a CC ppz domain protein and a PL domain protein to result in inhibition of leukocyte activation. The present sequence is a PL peptide. PDZ domains CC of proteins are named after three prototypical proteins: PSDS domains CC proteins are involved in synapse formation by organising transmembrane neurotransmitter receptors through intracellular interactions. The callibrations identified by the present invention can be used to treat a CC disease mediated by haematopoietic cells, e.g. autoimmune disease, clear asthma), atopic dermatitis, sutcimmune diseases (e.g. rheumatoid erratite, multiple sclerosis, insulin-dependent diabetes, Hashimoto CC thyroiditis, osteoarthritis), atherosclarosis, cancers, infectious CC disease (e.g. viral infection), ischaemia, vasulitis and Crohn's CC rejection of a solid organ transplant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       14-MAY-1999; 99US-0134117.

           The present invention relates to a method for modulating a biological CC function of an endothelial cell or haematopoietic cell, comprises introducing into a cell an antagonist that inhibits binding between a CC introducing into a cell an antagonist that inhibits binding between a CC ppz domain protein and a PL domain protein to result in inhibition of leukocyte activation. The present sequence is a PL peptide. PDZ domains CC of proteins are named after three prototypical proteins: PDZ domains CC proteins are involved in synapse formation by organising transmembrane convocatasmitter receptors through intracellular interactions. The CC neurotransmitter receptors through intracellular interactions. The CC inhibitors identified by the present invention can be used to treat a CC disease mediated by theamatopoietic cells, e.g. autoimmune disease, conflammation, allergy (e.g. drug allergies), inflammatory bowel diseases, concers, asthmal, atopic dermatitis, sutoimmune diseases (e.g. rheumatoid arthritis, osteoarthritis, insulin-dependent diabetes, Hashimoto chipping asthmal, osteoarthritis), anterosciptosis, insulin-dependent diabetes, infectious
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               14-MAY-1999;

                                                                                                                                                                                                                              The invention relates to methods and reagents for determining the apparent affinity (Kd) of binding between a PDZ domain and a ligand. The invention also relates to methods and reagents for determining the Ki of an inhibitor of binding between a PDZ domain and a ligand, identifying an agent that enhances binding of a PDZ domain and a ligand, and determining the potency (K-enhancer) of binding between a PDZ domain and a ligand, by determining the ligand bound with an immobilised polypeptide comprising a PDZ domain and a non-PDZ domain on a surface. The modulator (preferably, an inhibitor) of interaction between PDZ and PL is useful for treating a disease characterised by leukocyte activation, e.g., an autoimmune disease that is characterised by inflammatory or humoral immune response, and for reducing inflammation in a subject. This sequence represents a c-terminal peptide of a PDZ-binding protein relating to the invention.
                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Assays for determining the affinity of binding between a PDZ domain and a ligand, and determining the Ki of an inhibitor of the binding, comprises using a polypeptide comprising a PDZ domain and a non-PDZ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  C-terminal peptide of a PDZ-binding protein SEQ ID No 188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ABJ05193;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABJ05193 standard; Peptide; 20 AA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease. The inhibitors can also be used to prevent transplantation rejection of a solid organ transplant.

                                                                                            The present invention describes a method (M1) for modulating a biological CC function of an endothelial cell or haematopoietic cell. M1 comprises CC introducing into the cell, an agent that inhibits binding of a PDZ CC (PSD95, Drosophila large disc protein, and Zonula Occludin 1 protein) CC protein and a PDZ ligand (PL) protein in the cell, and so modulates the biological function. Also described is a method (M2) for determining CC whether a test compound is an inhibitor of binding between a PDZ protein CC and a PL protein. M1 is used for modulating a biological function of an CC endothelial cell or haematopoietic cell e.g., T-cell or B-cell, by an CC inhibitor (I) is useful for treating a disease characterised by leukocyte activation, where the disease is characterised by an inflammatory or cCC inhibitor (I) is useful for treating a disease characterised by leukocyte cactivation, where the disease is characterised by an inflammatory or CCC inflammatory and humoral immune responses e.g., inflammating (ameliorating complementary and humoral immune responses e.g., inflammation, allergy, inflammatory bowel diseases, ulcerative colitis, ileitis and enteritis, ilertire and enteritis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-NOV-2000; 2000US-0710059.

                                                                                                                   The sequence represents the tumour necrosis factor receptor Fas death domain (Fas DD). The invention relates to a novel solution comprising a tumour necrosis factor receptor 1 death domain. The solution is useful for identifying a potential inhibitor of TNFR-1 DD, for the design and selection of potent and selective inhibitors of TNF signalling pathways, and for generating a three-dimensional structure for an unknown molecule

A novel human tumour necrosis factor receptor, designated TR9, has been isolated. The TR9 receptor is also known as Death Domain Containing Receptor 6. TR9 polypeptides, polynucleotides or agonists are useful for treating, preventing or diagnosing common variable immunodeficiency, X-linked agammaglobulinaemia, severe combined immunodeficiency and Wiskott-Aldrich syndrome, autoimmune diseases (such as rheumatoid arthritis, allergic encephalomyelitis, multiple sclerosis, diabetes mellitus and asthma), HTV infection, epilepsy, cancer, cardiovascular diseases and other neurological diseases.

A cDNA clone (AAR194527) coding for the variant was obtd. from human peripheral blood mononuclear cells. The Fas dell variant lacks the transmembrane domain of insoluble Fas antigen (AAR99681). Recombinant dell variant, or fragments of it, can be expressed in prokaryotic or eukaryotic (e.g. COS) cells. Detection of increased levels of soluble forms of Fas antigen can be used to diagnose autoimmune diseases, esp. systemic lupus erythematosus and angioimmunoblastic lymphadenopathy.

                                                                                                                                                            ঠ
                                                                                                                                                                                                                                                                                                                            provides a method for inhibiting a proinflammatory response in a cell mixture by administering an immunosuppressive agent which in hibits the proinflammatory activity of Fas ligand (Fasi). In some embodiments, an Pasi is coadministered with the immunosuppressive agent, and the cell mixture comprises neutrophil cells. The method can be practised in vitro, ex vivo or in vivo. Suitable immunosuppressive agents include antisense molecules that inhibit endogenous Fasi expression, soluble Fas receptors or variants, ribozymes that inhibit the endogenous expression of Fasi, drugs that inhibit Fasi signalling, agents that induce the endogenous expression of transforming growth factor (TGF)-beta, and polynucleotides coding for an immunosuppressive agent such as polynucleotides coding for an immunosuppressive agent such as that an undesired Fasi-mediated proinflammatory response, e.g.
                                                                                                                                                                                                       Query Match

The TR10 polynucleotide, polypeptide, antibodies, agonists and antagonists are useful in the diagnosis, treatment or prevention of cancer, such as breast and ovarian cancer and leukaemia; autoimmune disorders such as multiple sclerosis, Crohn's disease and graft versus host disease; disease associated with increased apoptosis such as AIDS, Alzheimer's disease and Parkinson's disease; cardiovascular disorders such as limb ischaemia and congenital heart defects; inflammatory diseases e.g. allergy; wound healing; disorders associated with neovascularisation, e.g. diabetic retinopathy; infectious diseases such as viral, bacterial, fungal and parasitic infections; and neurological diseases such as amyotrophic lateral sclerosis.

   plasmid pF58; human Fas cDNA; soluble membrane protein; antibody production; diseases; treatment; prevention.
                                          Human Fas protein.
                                                                                      AAR78606;
                                                                                                                                                                                                                                                  Sequence
                                                                                                                                                                                                                                                                      The Fas antigen is implicated in apoptosis. A cDNA clone encoding the antigen was isolated (pF58) and the antino acid sequence of Fas was deduced from it. The mature protein has a calculated mol.wt. oi 36,000 and is a member of the NGFR/TNFR family of cell-surface membrane proteins. The inventors claim a protein comprising at least the extracellular domain of Fas antigen. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                             Claim 3;
                                                                                                                                                                                                                                                                                                                                                                               DNA encoding human cell surface antigen - used to clarify apoptosis mechanism of various types of cell, and to prepare monoclonal antibodies that react with tumour cells expressing

                                                                                                      AAR78606 (human Fas protein) is encoded by the plasmid pF58 which contains hFas cDNA. The plasmid was used in the construction of ar expression vector for the prodn. of recombinant soluble membrane proteins. The proteins can be used in antibody prodn. for the treatment and prevention of related diseases.

        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score

                                                                                                                          FUNCTION: Receptor for TNFSF6/FASL. The adaptor molecule FADD recruits caspase-8 to the activated receptor. The resulting death-inducing signaling complex (DISC) performs caspase-8 proteolytic activation which initiates the subsequent cascade of caspases (aspartate-specific cysteine proteases) mediating apoptosis. FAS-mediated apoptosis may have a role in the induction of peripheral tolerance, in the antigen-stimulated suicide of mature T-cells, or both. The secreted isoforms 2 to 6 block apoptosis (in vitro). SUBUNIT: Binds DAXX (By similarity). Binds RIPK1.

SUBCELLULAR LOCATION: Type I membrane protein (isoform 1);
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        molecular basis for apoptotic defects
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    92:3018-3024(1998).
